

EVENT COMMUNICATION

From the 29th to 31st of October 2019 in Barcelona runs the Barcelona Cybersecurity Congress, an exhibition entirely dedicated to cybersecurity. With more than 40 conferences and 3000 representatives, it is one of the major European security events.

A CTF is a competition in which you have to solve a set of puzzles (or challenges) related to IT security involving different disciplines such as forensic, cryptography, OSINT, web technologies or binary exploitation. When players solve a challenge, they receive a "flag" (a secret string of characters) that can be exchanged for points. In the context of a Jeopardy (model chosen for this event), the more points a team earns, the higher it climbs in the ranking.

However, we offer you an innovative CTF, linking Jeopardy and network exploration. Each team will be provided with an isolated infrastructure in which to operate. Players will have to find themselves the challenge platform as well as the different services present in their network.

Given the varied backgrounds of the participants, the challenges and the whole event will be in English. Our team will be there to assist the players if necessary during the entire contest, from 10.00 am to 18.00 pm on October the 29th.
